

band [[2]] 5 has cutouts 5.1 which correspond in their cross sections to that of the apertures 4.2 in the housing 2. The cutouts 5.1 are divided by individual, narrow strips 5.2, so that in the roller band [[2]] 5 the required tensile stress is maintained over the entire width and an airtight contact of the roller band [[2]] 5 against the two shafts 6 and 7 is ensured.

Please replace the paragraph starting at page 8, line ⁴7 with the following paragraph:

5/11/07
A.B

Figs. 2a to 2d show the individual parts of the control device 1 for controlling two passage openings and the sequence during the assembly of the control device 1. Fig. 2a shows the housing [[3]] 2 with the upper part 8.3 of the hollow body 8 pivoted open.
